

[2017 New Easily Pass Microsoft 70-744 Exam With Lead2pass Latest Microsoft 70-744 Brain Dumps (21-40)]

2017 May Microsoft Official New Released 70-744 Q&As in Lead2pass.com! 100% Free Download! 100% Pass Guaranteed! I have already passed Microsoft 70-744 certification exam today! Scored 989/1000 in Australia. SO MANY new added exam questions which made me headache?.. Anyway, I finally passed 70-744 exam with the help of Lead2pass! Following questions and answers are all new published by **Microsoft** Official Exam Center: <http://www.lead2pass.com/70-744.html> QUESTION 21 Your network contains an Active Directory domain named contoso.com. All domain controllers run Windows Server 2016. The domain contains a server named Server1 that has Microsoft Security Compliance Manager (SCM) 4.0 installed. You export the baseline shown in the following exhibit. You have a server named Server2 that is a member of a workgroup. You copy the (2617e9b1-9672-492b-ae6a-0505054848c2) folder to Server2. You need to deploy the baseline settings to Server2. What should you do? A. Download, install, and then run the Lgpo.exe command. B. From Group Policy Management import a Group Policy object (GPO). C. From Windows PowerShell, run the Restore-GPO cmdlet. D. From Windows PowerShell, run the Import-GPO cmdlet. E. From a command prompt run the secedit.exe command and specify the /import parameter. Answer: A Explanation: Server2 is a non-domain joined computer using the the GPO pack feature. Source:

<https://technet.microsoft.com/en-us/solutionaccelerators/cc835245.aspx> LGPO.exe replaces the no-longer-maintained LocalGPO tool that shipped with the Security Compliance Manager (SCM).

<https://blogs.technet.microsoft.com/secguide/2016/01/21/lgpo-exe-local-group-policy-object-utility-v1-0/> QUESTION 22 Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016. Server1 has a shared folder named Share1. You need to ensure that all access to Share1 uses SMB Encryption. Which tool should you use? A. File Explorer B. Shared Folders C. Server Manager D. Disk Management E. Storage Explorer F. Computer Management G. System Configuration H. File Server Resource Manager (FSRM) Answer: C Explanation: [https://technet.microsoft.com/en-us/library/dn551363\(v=ws.11\).aspx](https://technet.microsoft.com/en-us/library/dn551363(v=ws.11).aspx) See section "To enable SMB Encryption by using Server Manager"

QUESTION 23 Your network contains an Active Directory forest named contoso.com. The forest functional level is Windows Server 2012. The forest contains a single domain. The domain contains multiple Hyper-V hosts. You plan to deploy guarded hosts. You deploy a new server named Server22 to a workgroup. You need to configure Server22 as a Host Guardian Service server. What should you do before you initialize the Host Guardian Service on Server22? A. Install the Active Directory Domain Services server role on Server22. B. Obtain a certificate. C. Raise the forest functional level. D. Join Server22 to the domain. Answer: D QUESTION 24 Your network contains an Active Directory domain named contoso.com. You create a Microsoft Operations Management Suite (OMS) workspace. You need to connect several computers directly to the workspace. Which two pieces of information do you require? Each correct answer presents part of the solution. A. the ID of the workspace B. the name of the workspace C. the URL of the workspace D. the key of the workspace Answer: AD Explanation:

<https://docs.microsoft.com/en-us/azure/log-analytics/log-analytics-windows-agents> QUESTION 25 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your network contains an Active Directory domain named contow.com. All servers run Windows Server 2016. All client computers run Windows 10. The relevant objects in the domain are configured as shown in the following table. You need to assign User1 the right to restore files and folders on Server1 and Server2. Solution: You create a Group Policy object (GPO), link it to the Operations Users OU, and modify the Users Rights Assignment in the GPO. Does this meet the goal? A. Yes B. No Answer: B

QUESTION 26 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your network contains an Active Directory domain named contoso.com. The domain contains multiple Hyper-V hosts. You need to deploy several critical line-of-business applications to the network; to meet the following requirements: - The resources of the applications must be isolated from the physical host. - Each application must be prevented from accessing the resources of the other applications. - The configurations of the applications must be accessible only from the operating system that hosts the application. Solution: You deploy a separate Windows container for each application. Does

this meet the goal? A. Yes B. No Answer: A QUESTION 27 Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1 that runs Windows Server 2016. Server1 has a volume named Volume1. A central access policy named Policy1 is deployed to the domain. You need to apply Policy1 to Volume1. Which tool should you use? A. File Explorer B. Shared Folders C. Server Manager D. Disk Management E. Storage Explorer F. Computer Management G. System Configuration H. File Server Resource Manager (FSRM) Answer: D

QUESTION 28 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your network contains an Active Directory domain named contoso.com. All servers run Windows Server 2016. All client computers run Windows 10. The relevant objects in the domain are configured as shown in the following table. You need to assign User1 the right to restore files and folders on Server1 and Server2. Solution: You create a Group Policy object (GPO), you link the GPO to the Servers OU, and then you modify the Users Rights Assignment in the GPO. Does this meet the goal? A. Yes B. No Answer: A QUESTION 29 Your network contains an Active Directory domain named contoso.com. You install the Windows Server Update Services server role on a member server named Server1. Server1 runs Windows Server 2016. You need to ensure that a user named User1 can perform the following tasks: - View the Windows Server Update Services (WSUS) configuration. - Generate WSUS update reports. The solution must use the principle of least privilege. What should you do on Server1? A. Modify the permissions of the ReportWebService virtual folder from the WSUS Administration website. B. Add User1 to the WSUS Reporters local group. C. Add User1 to the WSUS Administrators local group. D. Run wsusutil.exe and specify the postinstall parameter. Answer: C QUESTION 30 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your network contains an Active Directory domain named contoso.com. The domain contains a computer named Computer1 that runs Windows 10. Computer1 connects to a home network and a corporate network. The corporate network uses the 172.16.0.0/24 address space internally. Computer1 runs an application named App1 that listens to port 8080. You need to prevent connections to App1 when Computer1 is connected to the home network. Solution: From Group Policy Management you create a software restriction policy. Does this meet the goal? A. Yes B. No Answer: B QUESTION 31 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your network contains an Active Directory forest named contoso.com. All servers run Windows Server 2016. The forest contains 2,000 client computers that run Windows 10. All client computers are deployed from a customized Windows image. You need to deploy 10 Privileged Access Workstations (PAWs). The solution must ensure that administrators can access several client applications used by all users. Solution: You deploy one physical computer and configure it as a Hyper-V host that runs Windows Server 2016. You create 10 virtual machines and configure each one as a PAW. Does this meet the goal? A. Yes B. No Answer: B Explanation: "The PAW architecture does not allow for hosting an admin VM on a user workstation, but a user VM with a standard corporate image can be hosted on a PAW host to provide personnel with a single PC for all responsibilities.

QUESTION 32 Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server5 that has the Windows Server Update Services server role installed. You need to configure Windows Server Update Services (WSUS) on Server5 to use SSI. You install a certificate in the local Computer store. Which two tools should you use? Each correct answer presents part of the solution. A. Wsusutil B. Netsh C. Internet Information Services (IIS) Manager D. Server Manager E. Update Services Answer: A C Explanation:

[https://technet.microsoft.com/en-us/library/hh852346\(v=ws.11\).aspx#bkmk_3.5.ConfigSSL](https://technet.microsoft.com/en-us/library/hh852346(v=ws.11).aspx#bkmk_3.5.ConfigSSL)

<http://jackstromberg.com/2013/11/enabling-ssl-on-windows-server-update-services-wsus/>

QUESTION 33 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review

screen. Your network contains an Active Directory domain named contoso.com. The domain contains a computer named Computer1 that runs Windows 10. Computer1 connects to a home network and a corporate network. The corporate network uses the 172.16.0.0/24 address space internally. Computer1 runs an application named App1 that listens to port 8080. You need to prevent connections to App1 when Computer1 is connected to the home network. Solution: From Windows Firewall in the Control Panel, you add an application and allow the application to communicate through the firewall on a Private network. Does this meet the goal? A. Yes B. No Answer: A QUESTION 34 Your network contains an Active Directory domain named contoso.com. The domain contains five servers. All servers run Windows Server 2016. A new security policy states that you must modify the infrastructure to meet the following requirements: - Limit the rights of administrators. - Minimize the attack surface of the forest. Support Multi-Factor authentication for administrators. You need to recommend a solution that meets the new security policy requirements. What should you recommend deploying? A. an administrative forest B. domain isolation C. an administrative domain in contoso.com D. the Local Administrator Password Solution (LAPS) Answer: A QUESTION 35 Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution. After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen. Your network contains an Active Directory forest named contoso.com. All servers run Windows Server 2016. The forest contains 2,000 client computers that run Windows 10. All client computers are deployed from a customized Windows image. You need to deploy 10 Privileged Access Workstations (PAWs). The solution must ensure that administrators can access several client applications used by all users. Solution: You deploy 10 physical computers and configure them as PAWs. You deploy 10 additional computers and configure them by using the customized Windows image. Does this meet the goal? A. Yes B. No Answer: A QUESTION 36 Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2016. Server1 is configured as a domain controller. You configure Server1 as a Just Enough Administration (JEA) endpoint. You configure the required JEA rights for a user named User1. You need to tell User1 how to manage Active Directory objects from Server2. What should you tell User1 to do first on Server2? A. From a command prompt, run ntdsutil.exe. B. From Windows PowerShell, run the Import-Module cmdlet. C. From Windows PowerShell run the Enter-PSsession cmdlet. D. Install the management consoles for Active Directory, and then launch Active Directory Users and Computer. Answer: C Explanation: "Enter-PSsession -ComputerName localhost -ConfigurationName demo1.ep. You should see your prompt change to [localhost]: indicating that you are now in the special constrained session configuration. Run Get-Command. Observe the limited set of commands available". <https://blogs.technet.microsoft.com/privatecloud/2014/05/14/just-enough-administration-step-by-step/> QUESTION 37 Your network contains an Active Directory domain named contoso.com. The domain contains a server named Server1, that runs Windows Server 2016. A technician is testing the deployment of Credential Guard on Server1. You need to verify whether Credential Guard is enabled on Server1. What should you do? A. From a command prompt run the credwiz.exe command. B. From Task Manager, review the processes listed on the Details tab. C. From Server Manager, click Local Server, and review the properties of Server1. D. From Windows PowerShell, run the Get-WSManCredSSP cmdlet. Answer: B QUESTION 38 Your network contains an Active Directory domain named contoso.com. The domain contains 100 servers. You deploy the Local Administrator Password Solution (LAPS) to the network. You deploy a new server named FinanceServer5, and join FinanceServer5 to the domain. You need to ensure that the passwords of the local administrators of FinanceServer5 are available to the LAPS administrators. What should you do? A. On FinanceServer5, register AdmPwd.dll. B. On FinanceServer5, install the LAPS Windows PowerShell module. C. In the domain, modify the permissions for the computer account of FinanceServer5. D. In the domain, modify the permissions of the Domain Controllers organizational unit (OU). Answer: B QUESTION 39 Your network contains an Active Directory domain named contoso.com. You are deploying Microsoft Advanced Threat Analytics (ATA) to the domain. You install the ATA Center on server named Server1 and the ATA Gateway on a server named Server2. You need to ensure that Server2 can collect NTLM authentication events. What should you configure? A. the domain controllers to forward Event ID 4776 to Server2 B. the domain controllers to forward Event ID 1000 to Server1 C. Server2 to forward Event ID 1026 to Server1 D. Server1 to forward Event ID 1000 to Server2 Answer: A QUESTION 40 Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question. Your network contains an Active Directory domain named contoso.com. The domain contains a file server named Server1 that runs Windows Server 2016. You need to create Work Folders on Server1. Which tool should you use? A. File Explorer B. Shared Folders C. Server Manager D. Disk Management E. Storage Explorer F. Computer Management G. System Configuration H. File Server Resource Manager (FSRM) Answer: C
